

TouchPrint™ Photo Capture Mug Shot Kit

Complete Multi-Biometric Booking Software

- Captures high-quality NIST-compliant face images
- Results in more accurate searching
- Increases efficiency by reducing potential for operator error
- Integrates easily into existing booking process

Turn your TouchPrint™ Live Scan System into a multi-biometric capture station with the TouchPrint Photo Capture Mug Shot Kit. This add-on seamlessly integrates into the booking process, making it easy to capture fingerprints, face images and demographic information all at once. Use any one of our advanced TouchPrint live scan devices to capture high-quality images of a subject's fingerprints and complete demographic fields. An operator can then activate a video or digital camera for photo capture of full frontal, profile and SMT (scars, marks and tattoos) images.

Designed to simplify the photo capture process, the TouchPrint Photo Capture Mug Shot Kit reduces the potential for manual errors, such as centering, cropping or lighting of the images. Our kit also conforms to NIST's best practices

requirements for mug shots, thereby assuring better matching performance when conducting searches.

SIMPLIFIES THE PHOTO CAPTURE PROCESS

- Automatic face-finding does not require manual adjustments
- Instant re-sizing crops image to NIST requirements
- Additional checking for face tilting built-in

CAPTURES BETTER PHOTOS FOR BETTER MATCHING PERFORMANCE

- Image conforms to NIST best practice requirements for mug shot capture
- Verifies eyes, ears and head position for consistent image capture
