

IntelliLink™

Criminal Intelligence Application

Features

- Single entry, multiple use
- Share information locally, regionally, nationally with powerful networking capabilities
- Safe, secure access to information
- Intuitive graphical objects interface
- Exclusive free text features
- Mobile intelligence
- Linkage analysis
- Multiple security features
- Restricted/tiered access to information
- Intelligent search capability: perform searched based on phonetic codification, wildcard strings, etc.
- Captures and stores video clips, photographs, documents etc.

Linking State, Local and National Criminal Intelligence Professionals and Organizations

Data comes from various sources, but for criminal investigators, one of the biggest challenges is being able to identify relationships between events. IntelliLink gives investigators the power to share information across jurisdictions in a region, a country, or a group of countries and quickly link volumes of information from a variety of sources. It brings together data saved in a variety of formats, performs analysis and builds key connective links, significantly improving the productivity of your investigative team and saving valuable time and resources.

As the security of criminal intelligence information is of vital concern, IntelliLink provides a series of advanced security features. Network security verifies that only authorized machines have access to the server. Confidentiality is protected through data encryption, while password authorization and tiered restrictions placed on select records allow agencies to track and control who has access to their information. Instant e-mail messages enable the owner of the record to maintain full control of any activity involving their record, while the powerful Search Audit Tool allows the administrator to trace virtually every single operation performed by all IntelliLink users.

Identifies relationships between entities: The powerful linkage analysis capability gives users the ability to build key connective inks from seemingly unconnected data and information excerpts. From here, the graphical objects interface can show these links quickly and in an easy to understand format.

Performs intelligent searches: Handles phonetic codification, wildcard strings and special searches to match the physical characteristics of an individual. Its ability to search based on virtually any criteria significantly improves the effectiveness of criminal investigations.

Supports single-entry, multiple use cases: Designed to allow multiple agencies to contribute to the same database.

Keeps data secure: Provides a series of advanced features including network security which verifies that only authorized machines have access to the server. Confidentiality is protected through data encryption while password authorization and tiered restrictions placed on select records allow agencies to track and control how their information is accessed.

Streamline Your Criminal Intelligence Processes with IntelliLink™

Features

- IntelliLink can create records for and track associations between objects, create searchable file references and documents and display information in tabulated and/or graphic form.
- Assists investigators by providing timely and accurate criminal intelligence information on a national, regional and local level.
- IntelliLink gives you the power to share information across jurisdictions in a region, a country or a group of countries. Information is shared across multiple databases without replicating information onto each individual server. Records of information exist in one and only one database at a time.
- Significantly improves the productivity of your investigative team by giving you the ability to quickly link volumes of information from a variety of sources, perform analysis and build key connective links.
- IntelliLink is on the move! Now investigators on surveillance can access all the same information remotely in real time.

Commitment to Customer Success

Years of working closely with the law enforcement community have enabled us to develop innovative techniques to provide fast, effective, and even predictive customer service. You can count on us for experienced and dedicated services:

- Training in a “Train the Trainer” environment with customized classroom materials dedicated to application functionality, use of peripheral devices, trouble shooting, and administration features
- On-site installation and acceptance testing
- Multiple levels of maintenance and support to suit the needs of any agency regardless of size
