

ABIS® Workflow Manager

Complete Control over Your Biometric System

Identix AFIS Solution Components

Biometric Capture Devices

- TouchPrint™ Live Scan Systems
- Multi-Biometric Capture Stations
- IBIS Mobile Terminals

Examination Tools

- LatentExaminer
- TenprintExaminer
- FaceExaminer

Verification Tools

- TenprintVerifier
- FaceVerifier

Search System

- ABIS® System

Workflow Manager

Going beyond standard workflow functionalities, the ABIS® System Workflow Manager from Identix® offers unprecedented flexibility, giving you more power to customize the AFIS to your agency's specific needs.

MULTI-BIOMETRIC FRAMEWORK

- A single environment that handles workflows for finger, face, full hand and iris
- A customizable police agency workflow covering bookings, AFIS results review, and latent processing transaction flows
- A customizable civilian agency workflow covering enrollment, AFIS results review, and interfacing to card production and management subsystems

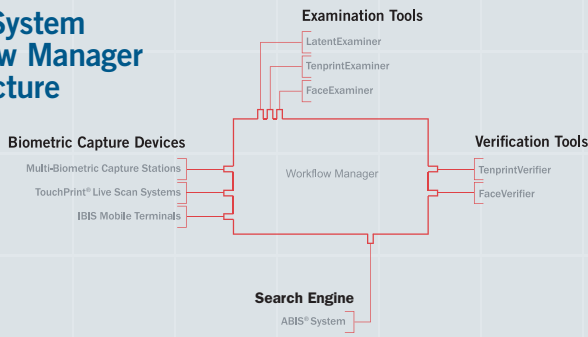

EASILY CUSTOMIZED FOR ENHANCED WORKFLOW

- Customer modifiable workflows without the need for vendor intervention
- Supports multiple, complex workflows simultaneously with customer-specific archiving rules
- Business processes required by existing practice or legal statute can be implemented
- Variety of audit trail reporting allows you to track all activity throughout the AFIS environment

SUPPORTS MULTI-VENDOR ENVIRONMENTS

- Standards-based approach supports and manages transactions to and from biometric workstations, live scans, AFIS, and ancillary systems
- XML/SOAP Web Services interfaces support

ABIS® System Workflow Manager Architecture

How it Works

1. The Workflow Manager receives biometric transactions from a workstation or other system.
2. The Archiver logs the record into a database that can be acted on based on customizable workflows, and maintains a detailed audit of all subsequent actions taken.
3. The transaction may be queued to ABIS® System's Search Engine and other AFIS systems for searching, either concurrently or serially based on business rules.
4. After the search process is completed, according to the defined workflow, the results may be queued to a number of receiving systems.
5. Detailed reports are available, or customers can utilize Crystal Reports as adjunct reporting.

ABIS® System Workflow Manager Specifications

System Requirements	
Operation System	
Desktop PC platform	Microsoft Windows
Server-based platform	Microsoft Windows 2003 Server, or Red Hat Enterprise Linux AS4 or ES4, or SUSE Linux Enterprise Server 9
Supported Standards	
ANSI/NIST	1-2000 types 1, 2, 4, 7, 8, 10, 14, 15
ANSI/INCITS	378, 379, 381 and 385
ISO	19794-2/4/5/6
Transmission via STMP, POP3, FTP, or NFS over TCP/IP	
Internet Web Services via XML and SOAP over TCP/IP	

5600 Rowland Road
 Minnetonka, MN 55343
 Telephone 952-932-0888
 Facsimile 952-932-7181
